AVIcode Strikes Deal in the Netherlands

Leading Dutch IT Provider, Solvec, Becomes AVIcode Partner

BALTIMORE, MARYLAND – JULY 28, 2005 – AVIcode, the leading provider of application and performance monitoring tools for the .NET environment, today announced a partnership agreement with Solvec Internet Solutions, a highly qualified provider of application development and hosting in the Netherlands.

“We’re pleased to add Solvec to our growing network of worldwide partners,” said Mike Curreri, AVIcode’s CEO. “Solvec has a proven track record of helping organizations achieve their business goals by optimizing application performance and availability. Solvec will enable our application monitoring solutions to penetrate another market, and we look forward to a mutually beneficial relationship.”

Approximately 80% of Solvec’s business involves consulting for .NET application development, making the company a logical fit for AVIcode. AVIcode’s Intercept Studio is the leading application and performance monitoring solution for the .NET framework. Intercept Studio is the only always-on monitoring solution for production applications that proactively identifies and reports on application faults and performance degradations without burdening the application server. Intercept Studio delivers complete root cause analysis, including the line of offending source code, to enable fast issue resolution and ensure maximum application uptime.

“Regular testing and monitoring only look at what’s going on outside the application, with Intercept Studio, you get an insider’s view,” said Rob van Eck, CEO of Solvec. “Before Intercept Studio, our clients didn’t know this type of detailed event information was available without cumbersome logging and instrumentation. Intercept Studio will help our customers save time and money.”

Additional details on AVIcode and Intercept Studio are available at www.avicode.com.

About AVIcode

AVIcode, a software development company, produces application fault management software. AVIcode’s products are designed to protect software investments by simplifying application maintenance and troubleshooting, dramatically reducing defect resolution time. AVIcode’s flagship product, Intercept Studio, detects crashes and performance degradations of production applications running on the Microsoft .NET Framework. For more information, contact AVIcode at 443.543.5858 or info@avicode.com, or visit the company Web site at <http://www.avicode.com/> for an evaluation edition of AVIcode software.
